Acro Solar Lasers builds the Solar Laser System: a computer guided-managed mirrored parabolic dish type solar energy collector of direct heat which work well in hot or cold weather. We offer three sizes of dish 44", 8 ft., and 14 ft. dishes. The dishes heat homes, pools, spas, domestic water, green houses, and industrial applications.

Acro Solar Lasers also designs and builds the computers and associated components of the dishes, and large hot water storage tanks required for these high efficeincy solar collectors. We also build temperature controllers and heat exchangers. The systems are available in kits and are installed by home owners and novices as well as professional installers. We offer the Solar Laser Systems wholesale, retail, and fully installed with full service. These systems are believed to be the best Btu/\$ value in solar energy.

Bob Lawrence & Associates, Inc. (BL&A) is a Washington, D.C. based firm whose principals average over 20 years experience working with international entities, industry and the Federal Government. When the firm was first established in 1986, its focus was on technical issues in the areas of energy and the environment. Since then, we have grown substantially in both number of professional associates and areas of expertise. Today we examine markets for energy efficient and renewable technologies in the Peoples Republic of China, Eastern Europe, Russia, and the Ukraine; explore and identify financing opportunities for geothermal projects worldwide; execute embassy interfaces on behalf of several commercial clients; help deserving clients obtain and complete government contracts; and provide strategic planning and technology transfer assistance to government clients. We are proud of our reputation for hard work, focused achievement, and ethical representation. We have an outstanding client base and we are dedicated to providing outstanding service.

The Corporation for Future Resources (CFR) methanogenic anaerobic fermentation technology converts biomass, as the process feedstock, into methane-rich gas that may be used to produce electricity with the most efficient power generation equipment, and/or process steam, drying, melting, etc. Furthermore, the solid co-product is a valuable organic soil amendment, nitrogen-rich anaerobic compost. The process products are obtained from a variety of plant materials or feedstocks that can be supplied from dedicated energy agriculture -- crops specifically planted for their rapid growth, ability to be economically harvested and fermentation qualities -- or from existing crop residues. CFRs technology features very low capital costs as well as very low internal energy loss in concert with the absence of environmental impacts. CFRs technology has been recognized by the U. S. Department of Energy as a commercially viable renewable fuels technology.

Chinook Power Technologies LLC designs and manufactures power electronics products and subsystems. Power electronics is that segment of electronics whose purpose is to convert bulk electrical power from one form to another. The products are called a variety of things, including converters, conditioners, power supplies, inverters, frequency changers and drives. The major applications include motor controls (variable frequency drives), uninterruptible power supplies, inverters for fuel and solar cells, welding power supplies and micro turbines. The total combined market for products using power electronics exceeds \$30 billion annually. Chinook has facilities and equipment that can support the design and manufacture of sophisticated products rated up to 1,000 kw.

CLARK SUBSTATIONS has over 50-years of experience in providing the highest quality packaged power substations to R.E.A.s, municipals, private utilities, and industries. As the first corporation to deliver a complete packaged substation, we have remained a leader in our industry. We guarantee quality, price competitiveness, on-time delivery, and excellent service. As a result, we have earned an outstanding reputation nationwide.

The design and manufacturing of substations require the technical knowledge and experience that only an established supplier can offer. CLARKS licensed professional engineers and designers possess the expertise to meet project requirements. Our in-house structural manufacturing facilities, well-stocked warehouse, and shipments on our own trucks assure delivery of a coordinated complete end product that saves money, time and effort.

CompressChek specializes in energy management surveys of commercial and residential properties. Additionally we retrofit HVAC systems to use less energy (electricity), usually in the 10% to 20% range. Using less energy equates to less run time and thereby extends equipment life and reduces down time. We do not sell or service HVAC equipment.

Combustion Expert is a software program that calculates basic combustion properties. In order to make real improvement to your process you need to know your existing efficiency. This software calculates the fuel efficiency, the furnace efficiency and the over-all process efficiency. The software also determines the heat requirements of your process, the correct air/oxygen to fuel ratio, the stack gas composition, the stack gas losses and the furnace losses. Change from oil to natural gas or from air to oxygen with the click of a mouse button at a cost you can afford.

About eBidenergy, Inc. --- headquartered in West Henrietta (near Rochester), N.Y., eBidenergy was founded in 1997. eBidenergy is an online provider of energy procurement, data management, and data analysis services for U.S.-based commercial and industrial businesses, and a service provider to industry stakeholders. Customers and strategic alliances include Advantage Energy, Xerox, Siemens, Celltech Pharmaceuticals, USI Energy, ECOM-ENERGY, Inc., New York State Energy Research and Development Authority (NYSERDA), and Aquila Energy. In June 2001, eBidenergy announced that it had completed its Meter Data Service Provider (MDSP) certification, becoming the first company in New York State to achieve this designation. eBidenergy offers clients a variety of near real-time (15 minute delay) and real-time data acquisition and control technologies that maximizes clients' flexibility and offers variable pricing options. For additional information, call (716) 427-2610 (Robert K. Camera - VP, Business Development) or visit www.eBidenergy.com.

Energetech Corporation is a power generation equipment supplier and energy consulting firm, providing solutions for clients who (1) have an inadequate primary supply of energy, (2) are paying too much for the energy supply they presently use or (3) desire a standby source for emergency backup. Of course, the solutions to these problems are often quite complex, depending on such diverse factors as geographical location, climate, available natural resources and so on. But Energetech Corporation finds the right answers at remarkable savings to users. ENERGETECH markets state of the art geothermal power generation systems. Standard gas fuel standby and prime power generations, Bio-diesel fueled generators and packaged photovoltaic systems for the home or small commercial application.

Energy Northwest is a public power agency generating electricity for the Pacific Northwest through the efforts of the staff at Columbia Generating Station. In addition, we are marketing energy services to public power utilities statewide. We are also embarking on several new business initiatives that will diversify our operations, including wind projects, solar stations, fuel cells, and combustion turbine systems. We continue to maintain and operate the Packwood Hydroelectric Generating Station, one of three of the region's "green" resources marketed by Bonneville Power Administration. We belong to the Northwest because we are a public power agency, created by the people.

ENTECH, Inc. is a privately held corporation that designs, manufactures and installs innovative solar products. In addition to its exciting state-of-the-art terrestrial solar power products, ENTECH also has space power products and solar daylighting products that are described on its website at www.entechsolar.com. ENTECH's two terrestrial solar products are the SunLine and SolarRow. The SunLine, using two of ENTECH's concentrating photovoltaic (PV) modules, provides electricity in any sunny part of the world for small kilowatt power applications, such as remote homes, remote water pumping and other off-grid power needs. The SolarRow uses the same PV module in a larger tracking frame to meet more substantial power demands such as utilities and villages. Also, ENTECH has initiated a product improvement program that will provide a very significant performance gain by incorporating gallium arsenide multi-junction cells in its current module. This effort is a result of the convergence of ENTECH's space and terrestrial solar technologies.

The mission of External Power LLC is to commercialize free piston Stirling engines in systems converting biomass fuels, fossil fuels and solar thermal energy to useful electric, hydraulic and pneumatic power. Our core competency is manufacturing methods for free-piston Stirling engines. External Power forms strategic relationships with other companies to help them develop, manufacture and distribute products to markets that those companies are well positioned to serve. External Powers initial focus is on residential and light industrial markets for micro-cogeneration systems heated by the combustion of biomass and fossil fuels. For example, External Power is assisting Wood-Mizer Products to develop micro-cogeneration systems fueled by wet, undensified biomass wastes for light industrial markets. External Power is also assisting BG Group ("British Gas") to introduce gas-fueled residential micro-cogeneration systems that BG plans to distribute to homeowners. External Power is eager to form additional strategic relationships to commercialize other types of micro-cogeneration systems and other free-piston Stirling engine products for particular target markets. Our top priority is a partner for commercializing residential micro-cogeneration systems fueled by wood pellets.

Heath Consultants, Inc. is a manufacturer and consulting firm that provides a variety of products and services for the utility protection and damage prevention markets. Heath Consultants, Inc. was founded in 1933, with an initial focus on leak detection for the natural gas industry. Through the years, Heath has expanded its products and services with a goal of becoming the world leader in utility protection and damage prevention. From portable gas detectors, confined space monitors, pipe and cable locators, to water leak detection equipment, Heath provides leading edge products and instruments. Gas leak investigation and inspections, underground utility damage prevention, water accountability and training are among the specialties which make Heath Consultants an expert in utility services. Innovation and an active research and development team consisting of engineers and marketing experts keep up with the ever changing market demands to provide state-of-the-art services and products.

The Company has developed the first truly significant innovation in insulation for industrial and commercial piping systems. The unique features of INSULAIR® include optimized air gaps formed within rigid plastic walls, transparent/translucent appearance, is removable/reusable, and has a non-porous surface – which is less conducive to mold growth.

Howard Alan, holds licenses in California and Illinois, and began his practice in the 1960s. Since then we have produced such diverse projects as land planing in Ferrysburg, MI., and urban renewal housing in Chicago. We have been architects of commercial, residential, and institutional buildings as well as many design/build rehab projects some of which have solar components. Howards interest in using natural energies for buildings began in the 1970s when he designed and built an affordable home with a passive solar component. He has designed and built our direct gain solar studio with calculated building mass to hold winter sun energy for night radiation. Our building was given an award for sustainability by the A.I.A and U.I.A in 1993. Our most recent project is a five story inner city building that will make use of direct gain solar and solar water for thermal heating and cooling and domestic hot water applications. Howard is currently vice president of the Illinois Solar Energy Association. Our work may be viewed online at: www.howardalanarchitects.com

IdaTech is a leader in the development of fuel processors and integrated PEM fuel cell systems. Our technological innovation combined with our expertise in automation and controls allows IdaTech to develop state-of-the-art fuel cell systems with various outputs for portable and stationary applications. Additionally, the IdaTech™ Fuel Processor Module is capable of producing the highest levels of pure hydrogen. Engineering and integration support services are provided to development partners working with the fuel processor module. With the support of our strategic partners, our products are being deployed on a global scale. As we approach commercialization, we continue to seek relationships with development partners that will shorten our time to market and broaden the acceptance of fuel cell technology.

Whether the need is P/PM, process engineering, scientific investigation, or security, the staff of MIT is not only knowledgeable and experienced, but dedicated to meeting them all. We are thermographers, we are engineers, we are in the field solving problems - and have been doing it for years. You can leverage this experience by letting us help you. We offer a complete family of hardware and software products to the IR imaging industry. These products have been developed and are configured to help you do your job better, faster and easier. We provide the tools that ensure you spend your time in the most productive way -- with the camera in your hands, identifying and solving problems. We are a member of the American Society for Nondestructive Testing, the Boston chapter of the Better Business Bureau, and the Maine International Trade Center.

MDG was formed to apply successful R&D results from areas of advanced electronics, energy storage, metallurgy, physics, communications and other success influenced by harnessing the newly discovered Neltron sub-atomic particle (part of the electron) causing electrons to do more and better work. Founders built & demonstrated first U.S. "Cell" phone in Miami 1974, pioneered the "Urine" battery, room temp hyperconductor, among others... Advanced current technologies include:

MDG "inverter-less" AC BATTERY/ INTERTIE: The Highest Efficiency AC ENERGY STORAGE. Virtually infinite expandable capacity DG, modular AC (10KWh) electric cell "blocks"-100 provide one (1)megawatt capacity. Grid intertie any RE /DG- Zero harmonics. AC voltage 230/440/550KV, to 1,000 MWh –Eliminates need for prior art: Diesel, G. Turbine, Pumped Storage, new Atomic by harnessing abundant Hy Li-ion stored off-peak grid electric power. Zero emission utility, zero transmission loss upgrade to existing utility system.

MD "Intelligent" AC/PV SYSTEM (grid Interactive, true wave 120/240/440(3-phase) to 550KV AC: 22% efficiency - under \$5/watt AC 24/hr day 300w-1Kw output PV panel, generates usable power when No other system can output; interties multi RE. PlugN-Play 230v, using thin wire cord-direct to ordinary single wall outlet! Integral energy storage.

MD-DC to AC module provides New AC "InverterLess" plugN Play capability from ANY solar PVmodule, use ordinary 120v house extension cord-plug directly into wall outlet for grid intertie, reverse watt meter! \$.99 per watt AC direct power output from DC panels or other DC source.

New, Breakthrough design!- Fossil Fuel Power Plant Combustion "Retrofit" Upgrade (also complete New Ultra high heat & performance Green Tech™ Coal/oil/g/biofuel plant design) for the lowest overall industry emissions. Coal missions- equal to the Cleanest ultra modern gas power plant; enhances carbon fuel efficiency. Reverse-Ion Fuel Cell – Alternative, supplemental (Hydrogen & Oxygen-Rocket Fuel !) production for ultra low particulate & GHG emissions, free Retrofit upgrade. Various other Aero Space, health & defense technologies.

NEPCO is a world-class, ISO 9001, engineering, procurement and construction (EPC) company with over 60 years of specialized experience in the design, construction, and maintenance of high efficiency power plants. This exclusive focus has resulted in a team where each member is a specialist in their own area of power plant expertise. The resulting increase in overall productivity means lower engineering and construction costs as well as cost effective, value added designs and work practices. These benefits accrue to everyone from owner to energy user. Because we are solely focused on EPC, NEPCO has an excellent, proven track record of bringing complex and diverse turnkey power and cogeneration plants on line, within budget and on schedule.

NOVA Energy Corporation is a privately held corporation, incorporated in the State of Delaware, USA. NOVA Energy Corporation has developed an advanced technology which produces a synthesis gaseous fuel, similar to natural gas, utilizing hydrocarbon waste as the feedstock in an environmentally acceptable manner that will establish an important recycling and waste-to-energy technology for the 21st century. The synthesis gaseous fuel produced at our research and development facility was used to fuel the onsite steam boiler in our generating plant where 2 MWs of electrical power was generated and surplus power was sold under agreement to Pacific Gas and Electric. The basis of the NOVA technology and patents is high temperature pyrogenic gasification of the full range of municipal solar waste and hydrocarbonous industrial waste in an oxygen free atmosphere which produces a clean burning synthesis fuel gas. Municipal solid waste processed by our technology meets the definition of material being "recycled" by the United States EPA and is classified as "Renewable energy" by the United States Department of Energy.

NREC Power Systems, Inc. is a premier diesel engine remanufacturing company that supplies diesel engines and engine generators to customers who require constant power under all conditions. Our remanufactured engines are used for new construction or repower applications in the marine, power generation, co-generation, drilling and transportation industries. In addition to engine remanufacturing, NREC provides parts and service for the repair or overhaul of these engines in our shop or at any location world-wide. Many of our mechanics and electricians carry current passports and are prepared to leave for any destination on very short notice.

We are turnkey designers, fabricators, builders, financiers and distributors for Kawasakis environmentally sensitive industrial gas turbine generator and cogen systems. Kawasaki is ranked as the world leader in industrial (non-aeroderivative) gas turbine "Dry Low Emission" (DLE) technology as a result of its experience in developing and expanding the market with superior performing Standby, Baseload and Co-generation power plants. We are the only manufacturer currently using "Xonon" Equipped Combusters. With Xonon we are able to reach 2.5 ppm Nox without the addition of SCR and the related environmental issues of storage and disposal (SQMD - South Coast Air Quality Management District requires a min. of 5 ppm Nox). Please visit our web page.

Pump Engineering, Inc. manufactures pumps and energy turbo pumps for the gas processing and reverse osmosis industries. Simplicity of design, high efficiency, and compact size are distinguishing characteristics of all PEI products. PEI is particularly pleased to offer the Hydraulic Turbocharger™ (HTCII) to the industry. This unique device not only recovers energy from waste streams, but it also allows the possibility of new system designs for multistage reverse osmosis plants that significantly enhances membrane performances. Additionally, for large gas processing and RO systems, the Hydraulic Turbocharger™ can dramatically lower capital cost by downsizing the main electrical and pump components.

New to our product line is the HPG feed pump providing hydraulic efficiencies up to 80 percent, adding cost savings, convenience and reliability to your RO seawater desalination or gas processing system. Single stage simplicity, compact size, low-cost maintenance, and quick-in-place repair make the HPG a preferred choice for RO feed. Patented high-efficiency hydraulics driven by proven gearbox technology offer the ideal pumping solution for drinking water, boiler feed and other high-purity applications. Combine the HPGs sought-after features with PEI's Hydraulic TurboCharger™ energy recovery turbine for the best pump package in RO service.

Senercomm is a hospitality leader in the manufacturing, sales, and development of guestroom energy management and communication systems using passive infrared (PIR) occupancy-based technology.

Senercomms R&D and quality assurance standards have yielded current generation energy management systems that can reduce guestroom run time by as much as 30-40%.

Benefits include improved profitability, and increased property value derived from enhanced bottom-line performance. With the introduction of communications systems such as innPulse and its new generation of Direct Digital Control thermostats, Senercomm continues to maintain its strong positioning as a leading edge provider of digital temperature controls and staff productivity enhancements.

Currently Export: No

Wholesale distributor of energy-efficient electric motors and energy conservation products for electric motors. SM Service & Technology staff engineers will survey the motor equipment in your plant and in the Department of Energys MotorMaster+ computer program, make recommendations for cost-effective, energy-saving improvements. The energy savings can usually be accomplished either by improving motor efficiencies or by the installation of energy reduction devices such as the Power Commander, or Variable Frequency Drives and may include substantial rebates on the purchase of energy efficient motors. Payback periods usually fall below 2 years and can be immediate in some applications.

Stirling Energy Systems (SES) is a systems integration and project management company for utility-scale renewable power plants utilizing both wind and concentrating solar power. SES is teamed with strong partners, including Kockums of Sweden, Vestas of Denmark, the U.S. DOE, NASA, and Boeing. SES utilizes its own proprietary technology, its Dish Stirling System, for solar power plants both domestically and internationally and Vestas Wind Machines for wind power plants domestically. SES also utilizes its rights as a distributor of Stirling Engines to provide gensets for distributed generation purposes. In the future, SES will also be developing projects using other renewable resources, such as biomass and hydrogen.

A Dish Stirling solar power plant can range in size from 25 kW to 100s of MWs, depending upon the market. In addition, a Dish Stirling solar power plant may be located either on or off the grid. The SES genset produces 25 kWh of electricity and may also be located on or off the grid.

SES is headquartered in Phoenix, Arizona and has its engineering and technical demonstration facilities at the Boeing Aerospace Campus in Huntington Beach, California. SES also has a demonstration and training facility at the UNLV campus in Las Vegas, Nevada.

SES is currently developing projects in South Africa, Australia, and Spain and is considering projects in Italy, India, China, and Mexico.

Sunnyside Solar, Inc. is a small family-owned company specializing in photovoltaic electric systems - Sunlight to Electricity. We provide design, engineering, sales, installation and service.

Sunnyside Solar was founded in 1979 primarily working at that time with solar domestic hot water systems, solar greenhouses and conservation projects. Sunnyside Solar sold its first photovoltaic panel in 1983 and incorporated in 1990. Since the mid-80s Sunnyside Solar has focused primarily on solar electric systems and related products and services.

TRD specializes in the improvement of the overall productivity and profit margins by optimizing the efficiency levels of individual technologies, which interact in industrial and commercial operations. This process is called Optimization of Technological Resources. TRD consultants have many years of experience as executives, across various industries, in engineering, finance, plant management, law and other disciplines. They work individually or in teams, formed to match specific tasks. Advanced management tools, developed by TRD, and the ability to attract scientific and industrial specialists gives TRD an understanding and capability unparalleled in its field of expertise.

Tetra Tech EM Inc. (Tetra Tech) is a large publicly owned business that provides specialized environmental and energy management services to government and commercial clients. A wide range of technical capabilities is available at 37 offices in the US and in strategic locations around the world.

Tetra Tech brings an integrated view of energy generation, transmission, and end-uses to energy management. We focus on integrating the environmental and economic aspects of energy management to apply environmentally sound, performance-based technology and management solutions to reducing energy and water usage at public and private sector facilities.

Tetra Tech has a range of contract venues available for both private and government clients. Services can be provided on a project basis or under master service agreements. Tetra Tech has approved California Multiple Award Schedules (CMAS) with the California Dept. of General Services to provide both environmental and energy management consulting services at state approved rates. The CMAS contract can be used by diverse government institutions such as State of California agencies, cities, counties, other local government bodies, and public education entities. Tetra Tech also has a venue for federal energy management and environmental contracts under two U.S. General Services Administration (GSA) Schedules.

Tetra Tech EM Inc. (Tetra Tech) is a large publicly owned business that provides specialized environmental and energy management services to government and commercial clients. A wide range of technical capabilities is available at 37 offices in the US and in strategic locations around the world.

Tetra Tech brings an integrated view of energy generation, transmission, and end-uses to energy management. We focus on integrating the environmental and economic aspects of energy management to apply environmentally sound, performance-based technology and management solutions to reducing energy and water usage at public and private sector facilities.

Tetra Tech has a range of contract venues available for both private and government clients. Services can be provided on a project basis or under master service agreements. Tetra Tech has approved California Multiple Award Schedules (CMAS) with the California Dept. of General Services to provide both environmental and energy management consulting services at state approved rates. The CMAS contract can be used by diverse government institutions such as State of California agencies, cities, counties, other local government bodies, and public education entities. Tetra Tech also has a venue for federal energy management and environmental contracts under two U.S. General Services Administration (GSA) Schedules.

TK Electric is a retrofit supplier to HVAC and pumping applications in southern Nevada. Using the existing motor control centers and starters on water pumps, air handlers and fans, we supply VFDs (variable frequency drives), premium efficiency motors, transducers, PID set point controllers and other peripherals that help maximize the reduction of electrical energy that is being consumed to produce a desired result (such as water flow, building air temperature, static air pressure for air quality control or water pressure in a domestic water system). Recent retrofit projects were completed with 100% return on investment in less than one year. Examples include. Mirage Hotel dolphin exhibit, casino supply air handlers, volcano water feature, swimming pools & central plant). Also, air handlers & central plant @ Foley Federal building, Harrahs Hotel, Excalibur Hotel, Ramada Express Hotel, Bellagio Hotel, Golden Nugget Casino, Lady Luck Casino, and River Mountains water treatment plant.

New specialty bearing and flywheel battery products are being manufactured and marketed, based on the founder's forty years of lubrication and materials R&D, resulting in reduced lubricant stress and material fatigue, for increased product life at reduced production cost. Customers using our bearings obtain many years' life in their products where all standard bearings, of dozens tried, seize in a few hours. Our bearings are the enabling technology for our low-production-cost flywheels to store energy at high efficiency over wide temperature ranges for twenty years with zero maintenance and no ecological impact.

Windward Engineering provides design and testing services for wind turbines ranging in size from <1kW to several megawatts. We also conduct research on aeroelastic loads analysis methods for use in wind turbine design. We are actively involved in the development of consensus safety standards for wind turbine design and assist manufacturers in achieving compliance with those standards. Visit www.windwardengineering.com for more details.
